

A QUICK-START MANUAL

ColourInBook

A Creative Arts App for Kids 2–9

Parent-friendly · No ads · Works offline

1 Welcome, grown-ups!

Ready to make some art? **ColourInBook** is a little corner of the internet that's just for kids – a place where they can paint giraffes, draw doodles, smush stickers all over a page, and even make music while they paint. No pop-ups asking for money, no emails to enter, no “sign in with...” – just open and go.

This little manual walks you through everything in plain English. We'll cover how to open the app, how to pick the right mode for your child's age, what each of the four activities does, how to save their masterpieces as pictures you can keep forever, and why this app is safe to hand to a four-year-old without supervision.

How to use this manual

Chapters 1–2 are for parents – quick setup. Chapters 3–5 are for both of you to read together. Chapter 6 is the “oh no, something went wrong” page. Skim it once now, then come back when you need it.

2 Quick Start — Open It in 3 Easy Steps

Three taps and you're painting. Here's how to get from “I just downloaded this” to “look, Mummy, a purple giraffe!”

1

Open the file called `index.html` – double-click it, or right-click and choose “Open with... your browser”. Chrome, Safari, Edge, Firefox – any modern browser will do.

2

The welcome screen appears. Pick an age: tap the teddy bear 🧸 if your child is 2–4, or the palette 🎨 if they're 5–9.

3

Start creating! The Coloring book opens automatically. Tap the icons at the top to switch between activities whenever you like.

ColourInBook

Pick your age to start painting!

I'm 2-4

Big buttons, easy tools

I'm 5-9

More colors, more tools

Parent-friendly · No ads · Works offline

👉 Tap one of these two big cards to begin

Works on tablets, laptops, and phones

Tablets are best for little hands — bigger screen, finger-friendly buttons. The app remembers the age you picked, so next time it skips the welcome screen and jumps straight into Coloring.

3

Choosing the Right Age Mode

The same app behaves very differently for a 3-year-old versus a 7-year-old. Toddlers need chunky buttons, fewer choices, and no confusing text labels. Older kids want more colors, more tools, and words they can read. Pick the mode that fits your little artist — you can switch any time.

Toddler Mode (2-4)

- Huge buttons, easy to tap
- 6 bright colors only
- Icons everywhere, no text labels
- No eraser (too confusing!)
- Sound is always on in Music Paint

Kid Mode (5-9)

- Full toolbar with labels
- 12 colors to choose from
- Brush + eraser in Free Draw
- 4 sticker categories
- Sound on/off toggle

To switch age mode: tap the 👤 **Parent** button in the top-right corner, pick the other age, then close the popup. The screen updates instantly — no reloading, no losing the picture in progress.

4 The Four Activities — A Quick Tour

Four icons along the top of the screen, four ways to make art. Here's what each one does and how to use it.

Coloring

Friendly animals and shapes — giraffes, fish, snails, and more — waiting for spots of color. Pick a shape, then tap to dab paint wherever you like.

1. Pick a shape at the top
2. Pick a color from the rainbow
3. Tap or drag on the shape

Free Draw

A blank white page and a brush. Drag your finger (or mouse) to draw anything. Made a mistake? Use the eraser, or tap Undo to step backwards.

1. Pick Brush or Eraser
2. Pick a color
3. Slide to set brush size
4. Drag to draw!

Stickers

A treasure chest of emoji stickers — animals, food, nature, and fun stuff. Tap one, then tap the canvas to drop it. Drag for a sticker trail!

1. Pick a category
2. Pick a sticker
3. Tap the page to place it

Music Paint

The magic one. Each color plays a different musical note — and they always sound nice together. Paint a picture, hear a tune. Seriously delightful.

1. Pick a color (hear its note!)
2. Tap or drag on the dark canvas
3. Watch it glow and listen!

Undo and Clear — the safety net

Every activity has an **Undo** button (takes back the last thing you did) and a **Clear** button (wipes everything to start fresh). Clearing doesn't affect other activities — your giraffe painting stays put while you go draw in Free Draw.

5 Saving Your Masterpiece

When your child makes something they're proud of — and they will — you'll want to keep it. The big **Save my picture** button at the bottom of every activity does just that. *Note: saving requires a small yearly subscription (see Chapter 7). All four activities themselves are free — only saving is paid.*

1

Tap “Save my picture” — the big button at the bottom of the screen. (If it shows  and says “Subscribe to save”, you'll be prompted to subscribe first.)

2

If you're already subscribed: a “Picture saved! ” message pops up immediately. The picture is on its way to your device.

3

If you're not subscribed: a friendly modal appears with the price and a “Subscribe now” button. Pay once and Save unlocks for the whole year.

4

Find the file in your Downloads folder. It'll be named `my-coloring.png`, `my-drawing.png`, `my-stickers.png`, or `my-music-paint.png` depending on the activity.

Tips for parents

Save as many times as you like — each save makes a new file. Want to print? Open the PNG on your computer and print as usual. Want to share? Attach it to an email or message. The picture is a normal image file — it'll work anywhere.

You can hand the tablet to your child and walk away. Really. Here's why.

No Ads

Nothing pops up. Nothing flashes. Nothing tries to sell you anything. The screen is 100% for art.

No Data

Drawings stay on your device. Nothing is uploaded. No accounts, no tracking, no analytics.

Works Offline

Once the page is loaded, turn off the Wi-Fi and it still works perfectly. Great for car trips.

Quick troubleshooting

Nothing happens when I tap?

Refresh the page (press F5 or the reload button). If that doesn't help, close and reopen the browser, then open `index.html` again.

Where did my picture go after I saved?

Check your browser's Downloads folder. On most computers, look for `my-coloring.png` (or `my-drawing.png`, `my-stickers.png`, `my-music-paint.png`). On phones, check the Files app.

Sound not playing in Music Paint?

Look for the  button in the toolbar. Tap it once to make sure sound is on. (In Toddler mode this button is hidden — sound is always on.)

I want to switch age modes?

Tap the  Parent button in the top-right, choose Toddler or Kid, then close the popup. Done.

The app says I'm offline?

You can keep using ColourInBook — the banner is just a heads-up. Saving pictures and subscribing need internet, but painting and drawing work fine offline.

I subscribed but the Save button still says "locked"?

Wait a few seconds — payment verification can lag. If it's still locked after 30 seconds, refresh the page. If that doesn't help, use the "Recover subscription" link in the paywall and enter your Paystack reference number.

Subscribing to Save Your Art

Here's the deal: kids can play all four activities — Coloring, Free Draw, Stickers, Music Paint — completely free, forever. No time limits, no locked activities, no nag screens while they're creating. The only thing that requires a subscription is the **"Save my picture"** button. We figured: let kids try everything, and if parents want to keep the artwork, that's the part worth paying for.

When you tap Save, this friendly modal appears

The price depends on where you are. If you're in Ghana, you pay **GHS 60 per year** (about \$5). Everywhere else, it's **\$10 per year**. The app detects your country automatically using your internet connection — no need to pick. Both prices are one-time yearly payments, not auto-renewing subscriptions, so there's no surprise charges.

How payment works

Tap “Subscribe now” and a Paystack popup opens (Paystack is a trusted African payment processor). Enter your card or mobile money details, pay, and the Save button unlocks within a few seconds. You'll get an email receipt with a reference number — keep it safe in case you ever need to recover your subscription.

8 If You Change Devices or Clear Data

Subscription is tied to the device you paid on, not to an email or password. This keeps things simple — no logins, no passwords for kids to forget. But what happens if you get a new tablet, or accidentally clear the browser data? Your subscription isn't lost. Here's how to get it back on a new device.

- 1 Tap **“Save my picture”** on any activity — the paywall modal appears.
- 2 Tap **“Recover subscription with reference number”** — a small form expands.
- 3 Enter your **Paystack reference number** from your receipt email (looks like CIB-1234567890-abc123).
- 4 Tap **“Recover subscription”** — the app checks with our server and re-links your payment to this device. Save button unlocks immediately.

Can't find your reference number?

Search your email for “Paystack” or “ColourInBook”. The reference is in the subject line and body of the receipt email. If you still can't find it, email support@amoatengtech.com with the email address you used at checkout and we'll look it up for you.

9

Offline Mode – Art Anywhere, Anytime

ColourInBook is built to work without internet. Once the page has loaded once, your child can paint, draw, sticker, and make music on a plane, in a car, at the park, anywhere. The app caches everything it needs – shapes, colors, sounds – so offline use feels exactly the same as online.

A friendly banner appears when you go offline

When the connection drops, a small dark banner slides down from the top of the screen: **“You're offline – you can keep using ColourInBook, but saving pictures and subscribing need internet.”** It's a heads-up, not a roadblock. Your child keeps right on painting. When you're back online, the banner slides away and a small “Back online!” toast confirms the connection is restored.

Perfect for travel

Load the app once at home (or on hotel Wi-Fi), then turn off the device's data for the rest of the trip. No ads will sneak in, no pop-ups will interrupt, and the battery lasts longer too.

10

For Teachers & Multiple Kids

ColourInBook works great in a classroom or household with multiple children. There's no per-child account to manage – just open the app and hand over the device. Here are some tips for using it

with more than one kid, whether you're a parent of siblings or a teacher with a class full of students.

Age mode is per device, not per child. If you have a 3-year-old and a 7-year-old sharing a tablet, you can switch age modes between them: tap the Parent button, pick the right mode, close. The switch is instant. Each kid gets the right button sizes and color palette for their age. For classrooms with mixed ages, consider setting Kid mode by default – it has the most tools, and younger kids can still tap the big icons even if they can't read the labels.

Each activity keeps its own state. When one kid paints a giraffe and another switches to Free Draw, the giraffe painting is preserved. Switch back to Coloring and the giraffe is still there. Use the Clear button only when a kid wants to start fresh – otherwise their work stays put. This is great for classrooms: kids can rotate through activities without losing each other's progress.

Saving for a class art show. If you're subscribed, each kid can save their work to the tablet's Downloads folder. To keep things organized, rename the files after each kid saves (e.g., my-coloring-alice.png, my-coloring-bob.png). Or set up a shared cloud folder (Google Drive, Dropbox) and have the tablet auto-upload Downloads – then all the artwork lands in one place for an end-of-term show.

Classroom tip

For a class of kids on shared tablets, subscribe once per tablet. The Save button unlocks for whoever's using it. Kids can save their work to the tablet's Downloads folder, then you can collect the files at the end of class for an art show. If you have a school email, contact us about a bulk discount for multiple tablets.

Is ColourInBook really free?

Yes – all four activities are free forever. The only paid feature is saving pictures as PNG files. Kids can play as much as they want without ever paying.

Does the subscription auto-renew?

No. It's a one-time yearly payment. We'll remind you when it expires, but we never charge you without explicit action.

Can I add more animals or shapes?

If you're the app owner, yes – edit the `shapes.json` gist (see the technical README). If you're a regular user, the owner adds new shapes – you'll see them automatically next time the app loads (if online).

Does it work on iPad / Android tablet / Kindle?

Yes, on any modern browser. Safari on iPad works great. Chrome on Android works great. Even Kindle Fire's Silk browser works.

Will my child see ads?

Never. No ads, no sponsored content, no “rate the app” pop-ups, no in-app purchases beyond the one subscription. The screen is 100% for art.

Is my child's data being collected?

No. Drawings never leave the device. The only data we collect is the Paystack reference number for subscription verification – nothing about your child, their drawings, or how they use the app.

Why is it cheaper in Ghana?

ColourInBook is built by a Ghanaian developer for a global audience. Local pricing makes it accessible to Ghanaian families at a fair price, while international users pay a rate that's standard for kids' apps in their markets.

Can I get a refund?

If you're not happy within 7 days of subscribing, email support@amoatengtech.com with your reference number and we'll refund you – no questions asked.

ColourInBook is built with vanilla HTML, CSS, and JavaScript – no heavy frameworks, no trackers, no analytics. It's hosted on GitHub Pages (a free, reliable static-site host) and uses Cloudflare Workers for the paywall backend. The whole thing runs on free tiers, which keeps costs down and the app sustainable.

Need help? Email support@amoatengtech.com — we usually reply within 24 hours. Include your Paystack reference number if your question is about a subscription, or a screenshot if you're reporting a bug.

Where to find the app

The official URL is **amoatengtech.com/colourinbook**. Bookmark it on your device's home screen for easy kid access. (On iPad: open in Safari, tap the Share button, tap “Add to Home Screen”. On Android: open in Chrome, tap the three dots, tap “Add to Home screen”.)

For the technically curious

The codebase follows DRY, KISS, and SOLID principles. CSS is split into 7 files by responsibility (variables, base, layout, components, activities, age modes × 2). JavaScript is split into 13 modules, each with a single responsibility: shape loading, geo-detection, paywall, offline alerts, etc. The shape catalog is fetched from a GitHub gist so the owner can add new animals without touching code. The paywall uses a Cloudflare Worker to verify Paystack payments server-side — no login required, but bypassing it requires clearing device data (which also loses access).

The full source code is available under the MIT license. If you're a developer interested in forking, contributing, or learning from the architecture, see the README.md file in the project root.

Now go make some art! 🎨

ColourInBook — a little corner of the internet just for kids.
